

Open Position: Network Engineer

Do you enjoy working with networking technology and enterprise business systems? Do you want to be in a collaborative and fun environment working alongside a team of bright minds who are passionate about their job? If so, we are looking for that unique individual dedicated to helping us grow our top ranked community bank by joining our information technology team as a *Network Engineer*.

We aren't looking for 'off the shelf Programmers' or 'Help Desk jockeys'. For starters, we want personality to go along with a truck load of smarts. We want innovative thinkers. We want a person who can work independently, yet is receptive to mentoring and guidance. We want someone who can take a project, run with it, and see it through to its completion; someone who can be counted on when challenges arise. We want a collaborator. We need a uniquely bright teammate who will quickly become fluent in all aspects of bank information technology and associated regulations. Oh, and a superhero's mix of humor, passion, tech savvy, and a 'team first' mindset.

This is your kind of work. You will be in the trenches supporting the bank's growing internal infrastructure and everything that comes with it. Your daily responsibilities will include: VDI, RDS, SAN, BNAS, WLAN, WAN, VLAN, AD, Exchange, Wyse TC, as well as some desktop deployment.

Position Description:

- Effective provisioning, installation/configuration, operation, monitoring, and maintenance of our data center
- 24 x 7 availability of our AS400 based Core Banking system
- 24 x 7 availability of the network infrastructure – firewalls, routers, switches, wireless LAN, and endpoints
- Sustaining engineering of VoIP based telecommunications systems
- Design, manage, document, test, and implement new system deployments
- Build internal relationships with key functional groups and team leaders to aid in problem solving and in providing our team with the information necessary to be successful
- A desire and aptitude to learn a broad spectrum of technology, bank systems and workflows.
- Ensure our business systems meet or exceed the requirements for passing State and Federal Reserve Board examinations.

Technical Skills:

- VMWare, VSphere, Microsoft Terminal Services
- VDI and SBC virtual desktop technologies
- Microsoft Active Directory, Microsoft Server, Desktop and Application Suites including Exchange, Office, and SharePoint
- Familiarity with iOS and Android from an end user support perspective
- Knowledge of MS SQL design, implementation, management, and backup
- Enterprise backup and restoration systems (BNAS) and cloud hosted

Experience and Education:

- A 2 or 4 year college degree in Computer Science, Management Information Systems, Engineering, or Business Administration is preferred, but relevant job experience equivalent to 3 years business operations or IT application development experience will be considered.

Personal Competencies:

- A passion and desire to handle a variety of technical and business issues
- A high degree of integrity and honesty
- Strong written and verbal communication skills
- Superior analytical and problem solving skills
- A strong work ethic
- A sense of humor

Benefits:

- Competitive salary
- Realistic, while not quite European, vacation, sick and holiday time
- Gym access
- Medical (including HRA & HSA), dental, and vision coverage
- 401(k) retirement with employer match opportunity

To Apply:

If you'd like to join our team, send an email to *Greg Beltran* gbeltran@fmberlin.com with:

- Your resume
- A letter telling us more than 'you're looking for a job'. 40+ hours is a lot of time to spend with someone, so give us an idea of what we're getting ourselves into. Yes, tell us about your experience, but please also tell us a little about who you really are.
